INTRODUCTION

This log book and the engine log books are important documents in the airplane file. Federal Aviation Regulations require the airplane owner to maintain a current and complete record of accumulating flight time, and all repairs, alterations, and inspections. The log book has been designed to provide the owner with a means of maintaining such a record in one location.

The log contains space for maintaining a current record of flight time, maintenance description and documentation. A handy summary of Airworthiness Directives and Aerostar Service Bulletins and Service Changes complied with is located in the back of the log.

Keep this record available at all times in a safe dry place. The record is a part of the airplane in the sense that it must be transferred with ownership.
